

See next month's sales before it happens.

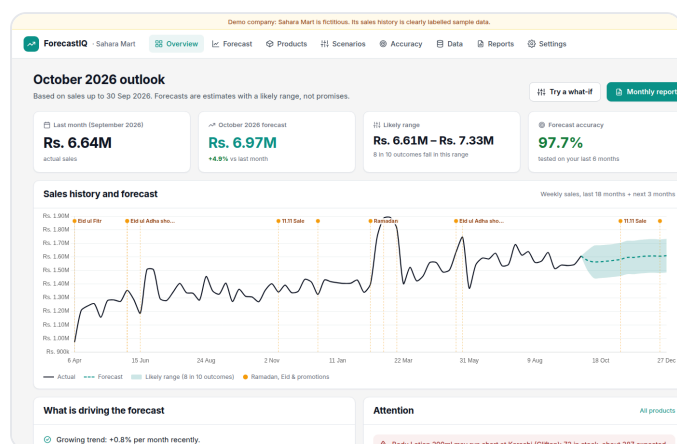

Plan stock and budget with a forecast that shows its likely range, explains why, and proves itself on your own past months.

THE PROBLEM

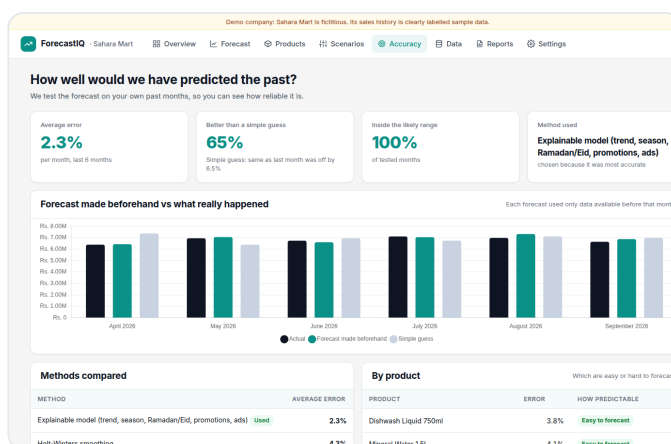

Stock and budgets are planned from last month and gut feeling. Ramadan and Eid peaks cause stock-outs; slow seasons leave warehouses full; finance has no defensible number.

THE SOLUTION

- Upload your sales Excel; it's cleaned automatically
- Forecast by product and branch with a likely range
- Plain-language reasons; stock-out & overstock warnings
- What-if scenarios and a monthly PDF report

Overview: forecast, range, accuracy, drivers and risks.

Accuracy tested on the last 6 months.
